DETAILED ACTION

Election/Restrictions

1. Newly submitted claims 24, 26 and 28 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: The claims are directed to the cathode of a fuel cell of a nonelected invention. Applicant's election was made in the reply filed on July 14, 2006.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 24, 26 and 28 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 2, 14, 18-20, 22, 23, 25 and 27 US are rejected under 35 U.S.C. 103(a) as being unpatentable over US 2,970,452 to Beckman et al. in view of US 6,739,578 to Barton et al.

Beckman shows a fuel supplier as seen in Fig. 1, having a casing 1, a partition member 25 movable fit in the casing and dividing the casing into a first chamber 21 and a second chamber 22, a spring 21 housed in the second chamber pressing onto a partition 26 or the partition member to discharge the fuel, a second chamber inlet port 50 and a

Art Unit: 3754

first chamber outlet 57. Beckman is silent about the outlet being openable upon connection with the fuel cell. Barton shows a coupling mechanism for a fuel cell, as seen in Fig. 4, with a valve that is openable upon connection of the fuel line and the fuel supplier. It would have been obvious to a person with ordinary skill in the art at the time the invention was made to modify the device of Beckman to include a coupling mechanism that is openable upon connection to reduce the possibility of fuel leakage and to facilitate connection between the supplier and the fuel cell as taught by Barton.

With respect to the intended use recitation of using the container to supply fuel to a fuel cell, it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987).

Response to Arguments

4. Applicant's arguments with respect to claims 1, 2, 14, 18-20, 22 and 24-28 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 3754

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
